

CT7040 TRENCHER

UNEARTH THE POWER The Wolfe Chain Trencher features a chain with a maximum cut width of 24" [61cm] & depth of 7ft [213 cm].

STATE OF THE ART TECHNOLOGY AND COMFORT

MODERN CAB DESIGN

AIR RIDE SEAT

DIGITAL CLIMATE CONTROL

GPS/AUTO STEER READY

TOUCH SCREEN DISPLAY

ERGONOMIC MACHINE CONTROLS

OPTIMAL MACHINE COOLING

The machine cooling system is designed with variable speed reversing fans. The variable speed fans help reduce fuel consumption while the auto / manual reversing feature makes for easy cleaning when operating in dusty conditions.

UNDER HOOD ACCESSIBILITY

The hoods are designed with extra clearance when open for easy maintenance access to the engine and hydraulics.

WEB APP & REMOTE CONNECTIVITY

This new addition to Wolfe's diagnostic system allows for our technicians to connect remotely to your machine as well as assist you with job site requirements. It can prompt Safety and PM checks, Capture Stoppages, and push service notifications/service schedules.

ERGONOMIC MACHINE CONTROLS

Ease of use and operator comfort are always top of mind. Operators need to be comfortable and confident in the machines. Wolfe understands these challenges so we moved to ISO-style controllers – allowing operators to be already familiar with the controller layout.

7° SIDE TILT

The side tilt feature automatically or manually keeps the boom vertical ensuring a precise grade on sloped terrain.

REEL CARRIER (OPTION)

The compact design has the ability to be folded up for easy transportation and quick field-ready transitions.

CENTRAL LUBE STATION

Allows safer and easier greasing from central locations. An auto-lube feature is available to reduce manual maintenance while ensuring that all lube points are getting the proper amount of grease.

CABLE GUIDES AND CONDUIT REEL CARRIER (OPTION)

Hydraulically controlled cable guides allow the cable/conduit to be loaded at ground level. No need to use auxiliary equipment to load. The remote control system also allows the operator on the ground to have full visibility of the loading procedure and insure the cables/conduit are not damaged as they are raised into position.

LAYBOX DESIGN & FABRICATION (OPTION)

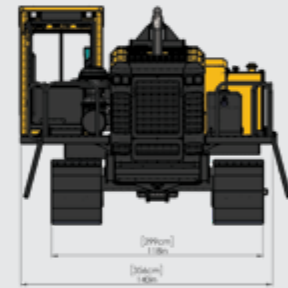

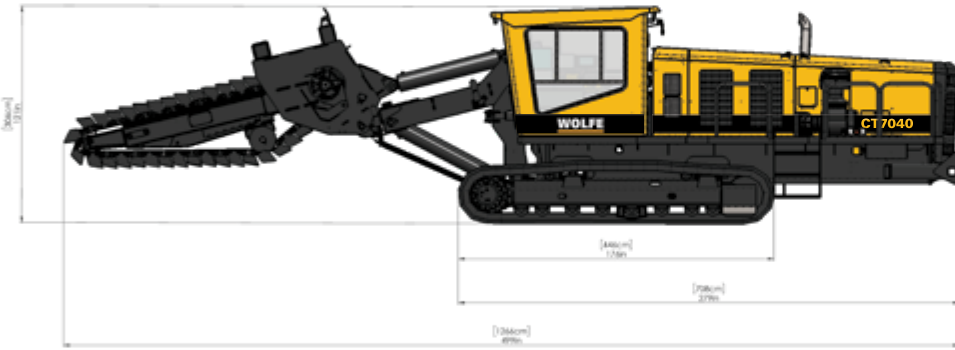

As engineering and installation specifications can change from job site to job site custom laybox design is a value added item we can offer our customers.

OUTPUT/PRODUCTIVITY CONTROL

An adaptive, on-the-go control system designed to enable automatic ground speed control during installation. This System relies on engine loads and system pressures to change the ground speed to compensate for variations in soil condition that the operator can not see.

Wolfe Heavy Equipment is a powerful agricultural and commercial trenching manufacturer committed to providing superior engineering and expert service. Wolfe trenchers are proven to hold grade in even the toughest conditions. UNEARTH THE POWER.
